Question Answer

What are the main components of the innate immune system discussed in Janeway's immunobiology?

Janeway's immunobiology emphasizes components such as physical barriers, phagocytes, natural killer cells, the complement system, and pattern recognition receptors like Toll-like receptors (TLRs).

How do pattern recognition receptors (PRRs) function in the innate immune response according to Janeway?

PRRs recognize conserved molecular patterns on pathogens, known as pathogen-associated molecular patterns (PAMPs), triggering signaling pathways that activate innate immune defenses.

What is the significance of dendritic cells in Janeway's immunobiology?

Dendritic cells act as antigen-presenting cells that bridge innate and adaptive immunity by processing antigens and activating T cells, playing a crucial role in initiating adaptive responses.

Describe the concept of 'danger signals' in Janeway's immunobiology.

Janeway introduced the idea that the immune system responds to 'danger signals' released by stressed or damaged cells, rather than solely recognizing non-self, which helps prevent unnecessary immune activation.

What role do Toll-like receptors (TLRs) play in pathogen recognition in Janeway's model?

TLRs are a family of PRRs that recognize specific PAMPs, leading to the activation of signaling pathways that induce inflammatory responses and adaptive immunity activation.

How does Janeway's view differ from traditional self/non-self discrimination in immunology?

Janeway proposed that the immune system is more focused on detecting 'danger' or stress signals from pathogens or damaged cells, rather than solely distinguishing self from non-self.

What is the importance of co-stimulation in T cell activation as described in Janeway's immunobiology?

Co-stimulation provides necessary secondary signals to T cells upon antigen recognition, ensuring proper activation and preventing autoimmune responses.

Explain the concept of 'immune surveillance' discussed in Janeway's immunobiology.

Immune surveillance refers to the immune system's continuous monitoring of tissues, especially for transformed or infected cells, to prevent disease development.

According to Janeway, how do innate immune responses influence adaptive immunity?

Innate responses shape adaptive immunity by providing cytokines, costimulatory signals, and antigen presentation, thus directing T and B cell responses.

What is the role of macrophages in Janeway's immunobiology?

Macrophages are key phagocytes that ingest pathogens, produce cytokines, and present antigens to T cells, orchestrating both innate and adaptive immune responses.
