Sample Practice Question Inspired by Calc AB 2013 To illustrate the style and complexity of calc ab 2013 multiple choice questions, consider the following example:

Question: Let $f(x) = x^3 - 6x^2 + 9x + 2$. Which of the following is true about the function's critical points?

A) f has a local maximum at $x = 1$.
 B) f has a local minimum at $x = 3$.
 C) f has no critical points.
 D) f has a point of inflection at $x = 2$.

Solution Approach: Find $f'(x) = 3x^2 - 12x + 9$. Set $f'(x) = 0$: $3x^2 - 12x + 9 = 0$. Simplify: $x^2 - 4x + 3 = 0$. Factor: $(x - 1)(x - 3) = 0$. Critical points at $x = 1$ and $x = 3$. Determine maxima/minima via second derivative or test points: $f''(x) = 6x - 12$. At $x = 1$: $f''(1) = 6 - 12 = -6 < 0$, indicating a local maximum at $x = 1$. At $x = 3$: $f''(3) = 18 - 12 = 6 > 0$, indicating a local minimum at $x = 3$. Answer: A) f has a local maximum at $x = 1$.

This example demonstrates the typical reasoning process involved in multiple-choice questions, emphasizing derivative calculations and second derivative test applications.

Conclusion The calc ab 2013 multiple choice section remains a vital part of the AP Calculus AB exam, challenging students to apply their understanding of calculus concepts in a timed environment.
