Sample Physiotherapy OET Referral Letter: Breakdown and Analysis While actual OET responses are personalized, analyzing a sample can illuminate effective strategies.

Sample Scenario Overview: A 45-year-old male patient with persistent lower back pain following a lifting injury. You are a physiotherapist referring him to an orthopedic specialist.

Sample Extract: Dear Dr. Smith, I am referring Mr. John Doe, a 45-year-old male who has been experiencing persistent lower back pain for the past four weeks following a lifting incident at work. The pain is localized to the lumbar region, rated 6/10 on the pain scale, and worsens with activity. On examination, there is tenderness over the lumbar paraspinal muscles, decreased range of motion in flexion and extension, and slight muscle weakness in the lower limbs. No neurological deficits were observed. The patient reports difficulty performing daily activities and has been unable to return to work. Initial physiotherapy interventions included pain management techniques, core strengthening exercises, and education on proper lifting techniques. The patient responded gradually to treatment, with a reduction in pain severity to 3/10 and improved mobility. Given the ongoing symptoms and functional limitations, I recommend further assessment, possibly imaging, and consideration of specialist intervention. Continued physiotherapy focusing on functional restoration is advised.

Sincerely, Jane Doe, MSPT

Analysis: The letter opens with a clear purpose and relevant patient details. The history is concise, covering the injury, symptom duration, and severity. Clinical findings are summarized effectively without overloading details. The treatment provided and patient response are highlighted. The recommendation is specific and appropriate. The tone remains professional, and the language is precise.
